EDUCATION

B.S. in Computer Science

National Changhua University of Education (NCUE)

September 2023 – June 2027 (Expected)

Changhua, Taiwan

SKILLS

Languages - Basic Familiarity

Python, JavaScript, HTML/CSS

Frameworks - Project Experience

FastAPI, Angular

AI Applications - Project Experience

LLM API integration, RAG

Development Tools & Practices

Git/GitHub, Codex, Spec-driven development (OpenSpec)

LANGUAGES

Mandarin Chinese — Native

English — Intermediate

SUMMARY

Computer Science undergraduate at NCUE with internship experience developing Angular interfaces, TypeScript backend APIs, and cloud deployment workflows. Contributed to client projects involving batch data processing, API integration, and interactive learning applications, with additional hands-on experience building personal projects using LLM APIs and retrieval-augmented generation (RAG).

EXPERIENCE

Software Developer Intern — Aiii Co., Ltd.

Aug 2026 – Nov 2026

- Implemented an Excel-based batch invitation API with row-level validation, error isolation, and Firestore transactions to prevent duplicate invitations.
- Developed Angular interfaces and integrated APIs for a six-character learning game, including independent progress tracking and reporting.
- Built responsive course and quiz interfaces with personalized Canvas certificate generation, and resolved layout and download-state issues.

PROJECTS

VideoNote — AI-Powered Video Learning Note System

Python, FastAPI, OpenRouter, Whisper, Obsidian, Quartz · Jul 2026 – Aug 2026

Repo: github.com/oscar940327/video-note

- Developed a workflow that converts YouTube and Bilibili videos into editable Markdown notes using available subtitles or Whisper transcription.
- Added note editing, Markdown export, and integration with an Obsidian vault and a Quartz knowledge website.

RAG Financial Report Analysis

Python, Qdrant, Cross-Encoder, OpenAI API, Streamlit • Fall 2025

Repo: https://github.com/oscar940327/RAG-Financial-Report-Analysis

- Created a question-answering application for financial reports, combining document retrieval with LLM-generated answers.
- Used vector search and cross-encoder reranking to retrieve relevant passages, with prompts that instruct the model to acknowledge insufficient evidence.

Diary — Discord-based Personal Diary System

TypeScript, Hono, Cloudflare Workers • In Progress

Repo: https://github.com/oscar940327/diary

- Completed the initial Discord bot setup, including a private `/ping` command, request signature verification, owner-only access, and separate test and production environments.
